

boat nanny

How BoatNanny™ Works

The BoatNanny™ is a wireless monitoring / boat alarm system. The system consists of a Base Unit that is powered by AC or 12/24V DC, and a wireless Remote Unit that runs on 2 AA batteries. The Remote Unit is normally mounted in the engine room where it monitors the engine room's temperature and water level. It also has a contact relay switch that can be used to turn on a light, control HVAC, etc. There is no wiring between the Base Unit and the Remote Unit – the communication is done via a digital wireless link.

The Base Station, which normally is placed in the boat cabin, has a passive IR motion sensor, a temperature sensor, and an AC/DC voltage sensor to monitor the boat's power status. You communicate with the Base Unit by sending text messages using any cell phone. There is basically a cell phone inside the BoatNanny™ which utilizes the GSM (Global System for Mobile communication) digital cellular network. You send a command text message to the BoatNanny™ and it responds by sending you a text message. **It is as simple as that.**

How BoatNanny™ Uses the GSM Network

The BoatNanny™ employs the GSM network because of its quality of service and reliability. The BoatNanny™ will operate as long as it is within a GSM network, which extends throughout the world. Before the BoatNanny™ can access the GSM cellular network, the SIM card (Subscriber Information or Identity Module) which holds the subscriber's account information including the BoatNanny's phone number, must be activated. This involves setting up an account with a GSM cellular carrier such as Cingular and T-Mobile.

NOTE: For your convenience, The Paradox Marine staff will install a pre-activated SIM card. Just provide to us (up to three) cellphone numbers that you want an alarm message to be sent to and your BoatNanny™ will work right out of the box. Nothing to program or install, just plug it in!!! No fee for the programming/installation of SIM card. Service is offered by Datablaze/T-Mobile and includes 300 text messages/month for under \$10.

The BoatNanny™ also has the ability to communicate with a laptop or PC through email or a web browser. You can send command text messages from Cingular or T-Mobile's web site. You can also set up the BoatNanny™ to send you email alerts or status.
